

9 x 9

Remote monitoring kit.

The delivery of high-quality healthcare to rural populations remains a challenge in the third world. The low cost smartphone-based remote monitoring (e.g. heart rate monitors, bp cuffs, and glucose meters) would enable doctors to monitor remote patients and dispense medical advice.

- 
1. Increase access to medical care
  2. Allow patients to be ahead of major medical issues and possibly find appropriate care before major episodes
  3. Educate local care givers

1. Difficult to maintain
2. Requires major time commitment from participating physicians
