An interactive 'pillbox'.

The 'pillbox' collects passive information and connects with other IOT devices to prevent the patient from moving on with their day until they have adhered to their program.

1. Adherence will be forced in order for the user to not be inconvenienced.
2. Users wont be able to simply ignore the reminder device
3. Higher levels of engagement

1. Using other IOT devices may become problematic if patient does not not adhere
2. Older patients may become distressed
