8 x 9

A platform to allow physicians and parents to help children understand their diagnosis.

Patients often don't understand or don't know how to respond to diagnoses. Doctors would be able to add notes and recommendations to an application that provides educational content relevant to a diagnosis or laboratory result to help increase patient comprehension.

1. Make diagnoses less scary

2. Could provide appropriate distraction while allowing children time to process

3. Educational while fun

1. Costly and time consuming to set up

2. Lack of human interaction might make children feel alienated
